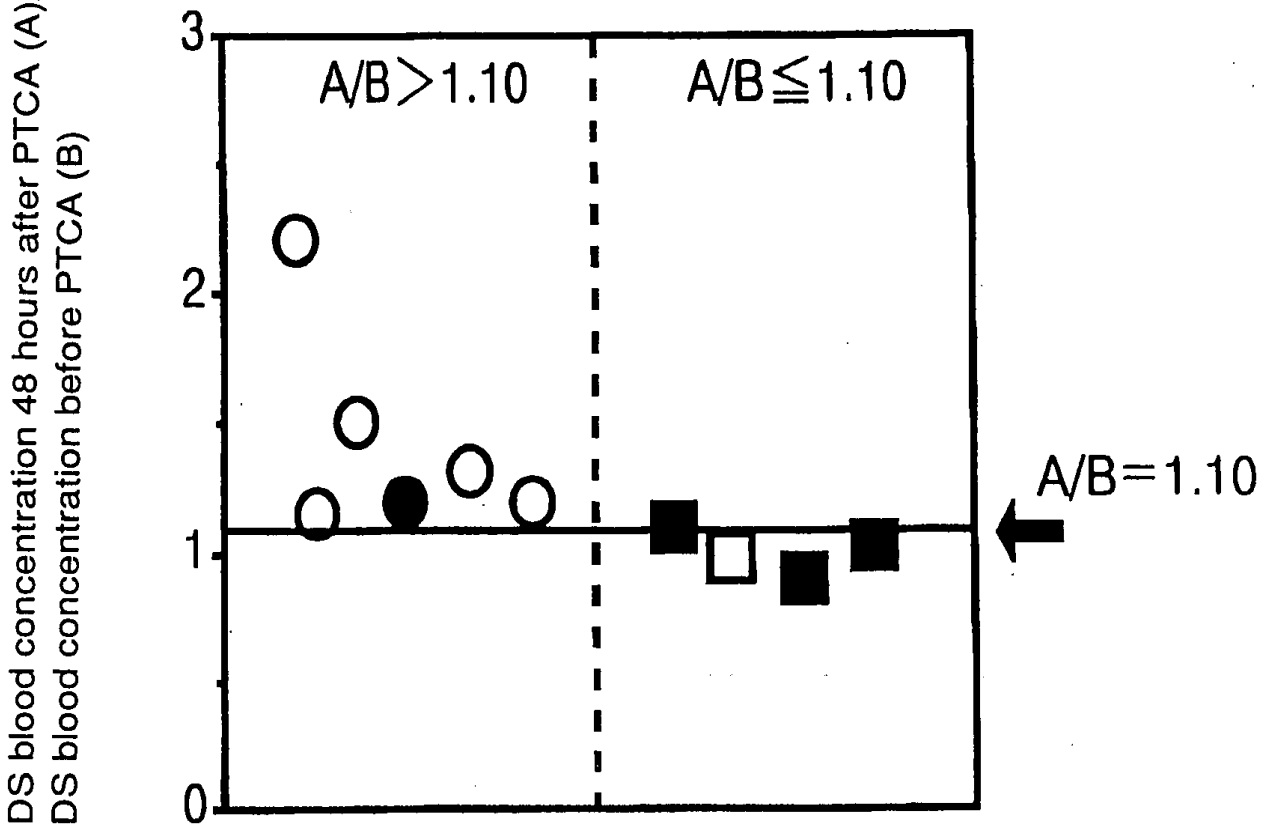
Fig. 2

The relationship between the fluctuation in the L-PGDS concentration in coronary blood before and after the PTCA



circle: a group in which an increase in the blood concentration was confirmed

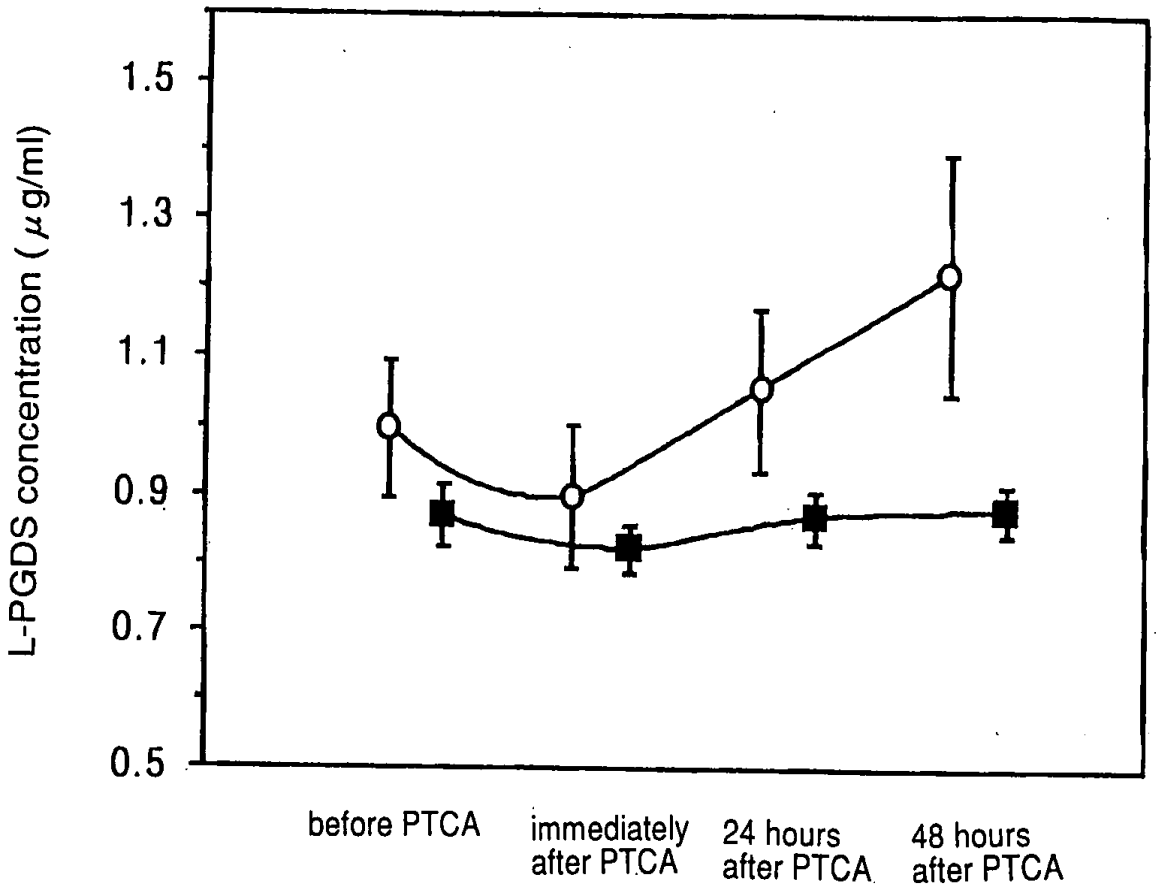
square: a group in which an increase in the blood concentration was not confirmed

Black circle or square: cases in which significant restenosis was confirmed (rate of restenosis: not less than 50%)

09/914,319

Fig. 3

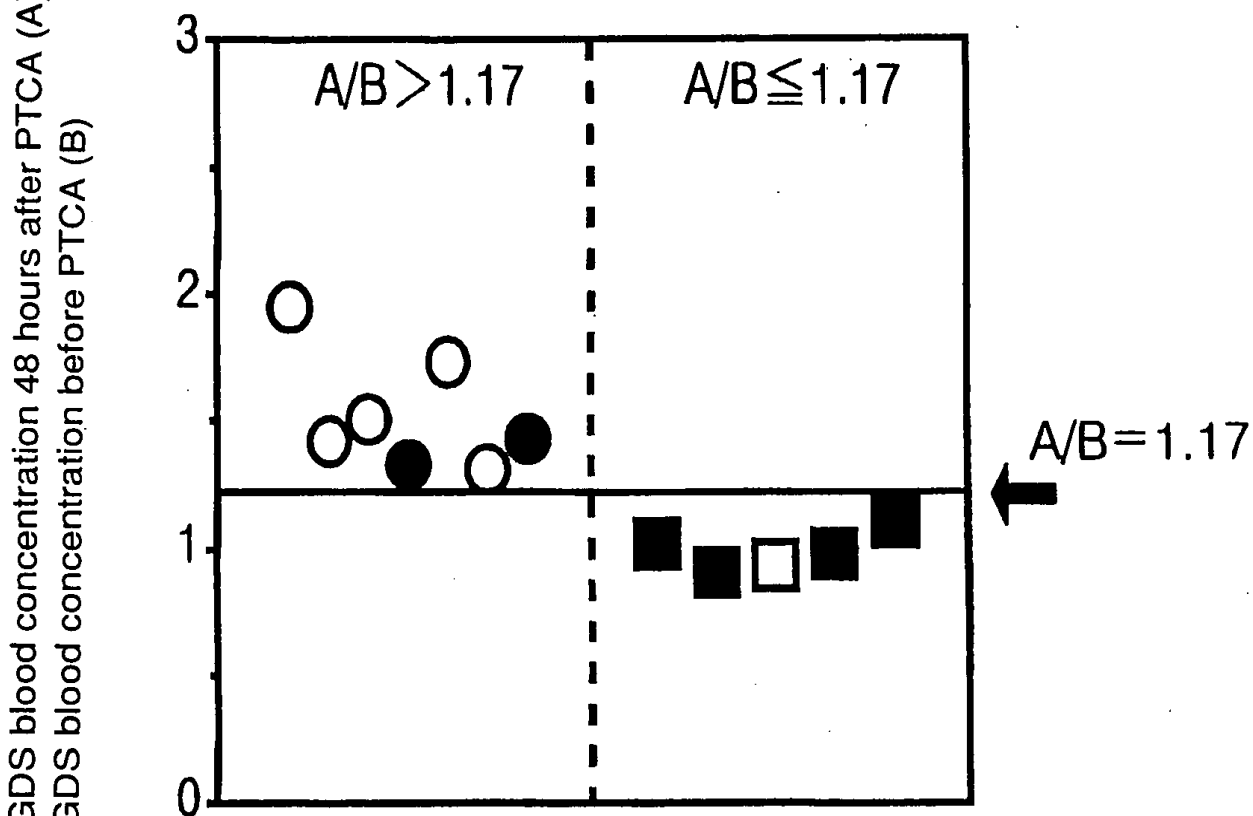
Serial changes in a L-PGDS concentration in peripheral blood after a PTCA (μ g/ml)



09/914319

Fig. 4

The relationship between the fluctuation in the L-PGDS concentration in peripheral blood before and after the PTCA



circle: a group in which an increase in the blood concentration was confirmed

square: a group in which an increase in the blood concentration was not confirmed

Black circle or square: cases in which significant restenosis was confirmed (rate of restenosis: not less than 50%)
